

Adding a 1 digit number to a 2 digit number, crossing the ten using column method.

$$45 + 8 = 53$$

T	O
4	5
	8
5	3
1	

1) Draw the column with tens and ones.

2) Represent the numbers into the right column.

3) Add the ones first. If the answer has a ten, add it into the tens column at the bottom and add the ones to the ones column. E.g. $5 + 8 = 13$ so the ten goes in the tens and the 3 ones go into the ones column.

4) Add the tens and any you added at the bottom of the column.

Let's do another one!

$$68 + 7 = 75$$

T	O
6	8
	7
7	5
